GET THE FACTS
COVID-19 in Children

Nearly 13 MILLION CHILDREN tested positive for COVID since pandemic onset.

COVID cases in children increased dramatically with Omicron

0-4 yrs
12-17 yrs
5-11 yrs

10/2/21
12/19/21
1/22/22

FACT Children DO get COVID-19.

Children can get severe or long-term disease from COVID-19.

After having COVID, your child could have long-term problems with:

- trouble breathing/asthma
- increased fatigue
- difficulty moving and playing
- loss of smell and taste
- brain fog

FACT COVID-19 vaccines are safe and effective for children.

Vaccines can prevent 7 in 10 COVID-19 hospitalizations.

More than 10 million children 5-11 years old have already received COVID-19 vaccines.

There have been no serious safety concerns reported in children 6 months to 11 years.

THE BOTTOM LINE COVID-19 vaccines protect young children against severe infection, even with Omicron.
