Sick with COVID-19 symptoms?

Treatments are now available for nonhospitalized adults and some children with COVID-19.

These prescription treatments:
- are FDA approved or authorized.
- decrease serious disease and hospitalizations.
- work best when used early.

For use within 5 days of first symptoms:

**NIRMATRELVIR/RITONAVIR (PAXLOVID™)**
- 2-3 pills twice a day for 5 days

For use within 7 days of first symptoms:

**REMDESIVIR (VEKURCY®)**
- 1 IV infusion (i.e., delivered through the vein) per day for 5 days

**MOLNUPIRAVIR (LAGEVRIO®)**
- 4 pills twice a day for 5 days

**BEBTELOVIMAB (MONOCLONAL ANTIBODY)**
- Single IV infusion over 30 seconds (followed by 1 hour of monitoring)

For use within 8 days of first symptoms:

**HIGH-TITER CONVALESCENT PLASMA**
- Single IV transfusion over 60 minutes

---

**Good to Know**

- There is only a short time window when these treatments can be used. So at first sign of illness, get tested for COVID-19 and contact your health care provider or visit covid.gov.

- There may be issues with drug interactions using nirmatrelvir/ritonavir (Paxlovid™) with other common medicines, so check with your health care providers.

- Molnupiravir should NOT be given to children or pregnant people, and:
  - Women should use contraception during the course.
  - Men should use contraception during the course and for 3 months after.

- These medications are not a substitute for vaccination or other methods to prevent COVID-19.
