

Know your risk for **serious COVID-19**

LOWER RISK

It depends on:

HIGHER RISK

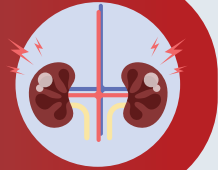

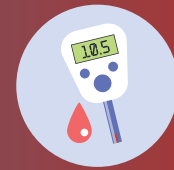

YOUR AGE

(more risk with older age, 50+ years)

YOUR MEDICAL CONDITIONS

(such as diabetes, pregnancy, kidney disease, and being overweight)

YOUR COVID-19 VACCINATION STATUS

(getting an updated COVID-19 vaccine)

YOUR IMMUNE SYSTEM

(if weakened by, for example, cancer treatment or transplant medications)

If you are higher risk:

- ✓ get an updated COVID-19 vaccine
- ✓ take a COVID-19 antiviral medication as soon as possible if you become sick

Visit vaccines.gov to find the nearest locations offering vaccines.

Talk to your doctor or pharmacist about your COVID-19 risk and next steps.
