

MASK UP!

FACE MASKS PREVENT THE SPREAD OF COVID-19.

Now is not the time to let your guard down. COVID-19 is still spreading in communities nationwide.

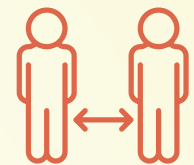

The COVID-19 vaccine may not be broadly available for several months, leaving those who are unvaccinated at risk of becoming sick. To protect yourself and others, wearing a multi-layered, snug-fitting mask is an effective way to help curb the spread of the pandemic, but it's not the only one. **Even if you received a COVID-19 vaccine, you might still be able to spread it to others who have not.**

For more information, visit idsociety.org/covid-19.

#MaskUpAmerica

Avoid large crowds and gatherings, especially indoors.

Stay 6 feet away from anyone outside your household.

Wash your hands frequently.

Wear a mask even after vaccination.
