

WHAT ID EXPERTS DO TO PREVENT & TREAT CORONAVIRUS

When new infectious diseases like the coronavirus emerge, infectious diseases professionals call on their expertise in scientific observation, research and emerging best practices to prevent infection and encourage safe and effective treatment. Infectious diseases professionals are responding to the COVID-19 pandemic in numerous ways.

Present sound, science-driven evidence to inform recommendations to physicians and the public.

Infectious diseases experts use experience treating patients and scientific evidence to inform recommendations that keep people safe during the pandemic, and guide how they should be treated.

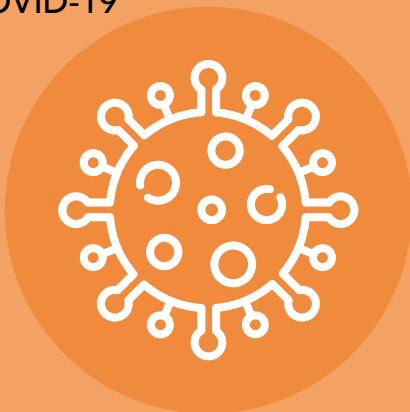

Advise policymakers and the public on life during the pandemic.

Infectious diseases experts advise people on core issues like social distancing, mask usage, testing, travel, education, dining, recreation and more.

Treat COVID-19 patients in the hospital in close coordination with other medical professionals.

Infectious diseases experts work shoulder to shoulder with other medical professionals to ensure the best care and treatment for COVID-19 patients. We develop clinical guidelines that ensure awareness and use of best practices.

Support medical research.

Infectious diseases professionals are on the front lines of medical research that's expanding our knowledge of the coronavirus and COVID-19. Our research efforts inform testing and treatment protocols.
