2013 PQRS OPTIONS FOR INDIVIDUAL MEASURES:
CLAIMS, REGISTRY

DESCRIPTION:
Percentage of patients aged 18 years and older with a diagnosis of community-acquired bacterial pneumonia with an appropriate empiric antibiotic prescribed

INSTRUCTIONS:
This measure is to be reported once for each occurrence of community-acquired bacterial pneumonia during the reporting period. Each unique occurrence is defined as a 45-day period from onset of community-acquired bacterial pneumonia. Claims data will be analyzed to determine unique occurrences. All patients 18 years and older with a diagnosis of community-acquired bacterial pneumonia should have documentation in the medical record of having an appropriate empiric antibiotic prescribed. It is anticipated that clinicians who provide care in the emergency department or office setting will submit this measure. Clinicians utilizing the critical care code must indicate the emergency department Place of Service code in order to be counted in the measure’s denominator.

Measure Reporting via Claims:
ICD-9-CM diagnosis codes, CPT codes, and patient demographics are used to identify patients who are included in the measure’s denominator. CPT Category II codes are used to report the numerator of the measure.

When reporting the measure via claims, submit the listed ICD-9-CM diagnosis codes, CPT codes, and the appropriate CPT Category II code OR the CPT Category II code with the modifier. The modifiers allowed for this measure are: 1P- medical reasons, 2P- patient reasons, 3P- system reasons, 8P- reason not otherwise specified. All measure-specific coding should be reported on the claim(s) representing the eligible encounter.

Measure Reporting via Registry:
ICD-9-CM diagnosis codes, CPT codes, and patient demographics are used to identify patients who are included in the measure’s denominator. The numerator options as described in the quality-data codes are used to report the numerator of the measure.

The quality-data codes listed do not need to be submitted for registry-based submissions; however, these codes may be submitted for those registries that utilize claims data.

DENOMINATOR:
All patients aged 18 years and older with the diagnosis of community-acquired bacterial pneumonia

Denominator Criteria (Eligible Cases):
Patients aged ≥ 18 years on date of encounter
AND
Diagnosis for community-acquired bacterial pneumonia (ICD-9-CM): 481, 482.0, 482.1, 482.2, 482.30, 482.31, 482.32, 482.39, 482.40, 482.41, 482.42, 482.49, 482.81, 482.82, 482.83, 482.84, 482.89, 482.9, 483.0, 483.1, 483.8, 485, 486
Diagnosis for community-acquired bacterial pneumonia (ICD-10-CM) [REFERENCE ONLY/Not Reportable]: A48.1, J13, J14, J15.0, J15.1, J15.20, J15.21, J15.22, J15.29, J15.3, J15.4, J15.5, J15.6, J15.7, J15.8, J15.9, J16.0, J16.8, J18.0, J18.1, J18.8, J18.9, Z16
AND
Patient encounter during the reporting period (CPT): 99201, 99202, 99203, 99204, 99205, 99212, 99213, 99214, 99215, 99281, 99282, 99283, 99284, 99285, 99291*, 99324, 99325, 99326, 99327, 99328, 99334, 99335, 99336, 99337, 99341, 99342, 99343, 99344, 99345, 99347, 99348, 99349, 99350

* Clinicians utilizing the critical care code (99291) must indicate the emergency department Place of Service (23) on the Part B claim form in order to report this measure.

NUMERATOR:
Patients with appropriate empiric antibiotic prescribed

Definitions:
Appropriate Empiric Antibiotic – For treatment of community-acquired bacterial pneumonia (CAP) should include any medication from one of the following four drug classes: Fluoroquinolones, Macrolides, Doxycycline, Beta Lactam with Macrolide or Doxycycline (as defined by current ATS/IDSA guidelines).
Prescribed – Includes patients who are currently receiving medication(s) that follow the treatment plan recommended at an encounter during the reporting period, even if the prescription for that medication was ordered prior to the encounter.

Numerator Quality-Data Coding Options for Reporting Satisfactorily:
CPT II 4045F: Appropriate empiric antibiotic prescribed
OR
Appropriate Empiric Antibiotic not Prescribed for Medical, Patient, or System Reasons
Append a modifier (1P, 2P or 3P) to CPT Category II code 4045F to report documented circumstances that appropriately exclude patients from the denominator.
4045F with 1P: Documentation of medical reason(s) for not prescribing appropriate empiric antibiotic
4045F with 2P: Documentation of patient reason(s) for not prescribing appropriate empiric antibiotic
4045F with 3P: Documentation of system reason(s) for not prescribing appropriate empiric antibiotic
OR
Appropriate Empiric Antibiotic not Prescribed, Reason not Otherwise Specified
Append a reporting modifier (8P) to CPT Category II code 4045F to report circumstances when the action described in the numerator is not performed and the reason is not otherwise specified.
4045F with 8P: Appropriate empiric antibiotic not prescribed, reason not otherwise specified

RATIONALE:
All patients need to be treated empirically according to the guideline recommendations.

CLINICAL RECOMMENDATION STATEMENTS:
All patients should be treated empirically. Patients treated as outpatients with no cardiopulmonary disease and no modifying factors should be treated with advanced generation macrolide: azithromycin or clarithromycin or doxycycline. Patients treated as an outpatient with cardiopulmonary disease and/or risk factors should be treated with beta lactam plus macrolide or doxycycline or fluoroquinolone alone. Empiric therapy based on the ATS guidelines lead to better outcomes than if the guidelines are not followed. (ATS) (Level II Evidence)

Fluoroquinolones (gatifloxacin, gemifloxacin, levofloxacin, and moxifloxacin) are recommended for initial empiric therapy of selected outpatients with CAP. (Level A Recommendation, Level I Evidence)

Other options (macrolides and doxycycline) are generally preferred for uncomplicated infections in outpatients. (IDSA) (Level A Recommendation, Level I Evidence)
A macrolide is recommended as monotherapy for selected outpatients, such as those who were previously well and not recently treated with antibiotics. (Level A Recommendation, Level I Evidence)

A macrolide plus a beta lactam is recommended for initial empiric treatment of outpatients in whom resistance is an issue. (IDSA) (Level A Recommendation, Level I Evidence)
